

# Marine Diesel Fuel

Diesel oil is a kind of distillate fuel containing heavy fractions or a mixture of light distillate fractions and a heavy fraction (residual fuel oil) and dark black, but remain liquid at low temperatures. The use of diesel oil is generally to fuel diesel engines with moderate or slow rotation (300-1000 RPM) or it can also be used as direct fuel combustion in industrial furnace. Diesel oil is usually referred to as Industrial Diesel Oil (IDO) or Marine Diesel Fuel (MDF). Comply with Director General of Oil & Gas decree No.14496.K / 14 / DJM / 2008.
